DIGITAL Systems and Options Catalog

### Product Description

The AlphaServer 1000A is an Alpha microprocessor server, available in 333 Mhz and 400 Mhz versions with 2MB ECC cache, and a 500 Mhz version with 8 MB ECC cache. All are available in Pedestal and Rackmount systems. Customers have a choice of three popular operating systems: DIGITAL UNIX, OpenVMS, and Microsoft Windows NT Server . The AlphaServer 1000A offers the following high-reliability features: heat sensor, fan failure and power supply sensors, and ECC memory. Integrated on system motherboard are fast wide single-ended SCSI-2 controller, diskette controller, two serial ports, one parallel port, and keyboard and mouse controller.

Advanced server management features are provided with all AlphaServer 1000A shipments via the bundled ServerWORKS Manager kit. The kit provides remote management capability through Simple Network Management Protocol agents (SNMP) for Windows NT, DIGITAL UNIX and OpenVMS. The management console software runs on any Windows NT or Windows 95 PC. The SNMP agents required to manage the server ship with the TCP/IP services of the operating system (with the exception of Windows NT which ships with the ServerWORKS kit). The SNMP agents collect critical server information including system status, I/O information, storage and disk information and network status information. Thresholds can be set to monitor key server events and alarms are forwarded to the ServerWORKS console. ServerWORKS Manager V2.0 includes remote pager support for alarm notification. In addition to ServerWORKS, DIGITAL includes key third party software applications including DIGITAL Power Management Software for Alpha provided by EXIDE, and application / database management software through BMC software's PATROL family of products.

**The AlphaServer 1000A Pedestal System** offers up to 10 internal storage devices including a floppy diskette drive and a CD-ROM, one 5.25-inch bay for an optional removable media drive, and seven hot swap StorageWorks wide or narrow disk drives. The system supports up to 1 GB of memory and over 30 GB of internal storage with seven 4.3 GB disks.

**The AlphaServer 1000A Rackmount System** offers up to 6 internal storage devices including a floppy diskette drive and a CD-ROM, one 5.25-inch bay for an optional removable media drive, and three wide and/or narrow disk drives. The system supports up to 1 GB of memory and over 12.9 GB of internal storage with three 4.3 GB disks. Cabinet systems are rackmount systems mounted with front facing StorageWorks shelf and two power distribution units into a standard 19" EIA Cabinet.
